

How I built a multi-agent OS for this company

Cursor agents · GitHub repos · Automations · live tools

M

Gmail · Daily Growth Checklist

SUPERSEED MEDIA

Daily Growth Checklist — 20 Aug 2026

26 actions

8 broken loops

2 waits

ZEN	TAMMY	ELICIA
9	6	11

Priority follow-ups (PII blurred)

1. P1 🌶️🌶️🌶️🌶️🌶️ [blurred] · 1st Meeting Arranged · OVERDUE

2. P1 🌶️🌶️🌶️🌶️ [blurred] · Proposal / sign-off

3. P2 🌶️🌶️🌶️ [blurred] · Topic hold · confirm date

4. P2 🌶️🌶️ [blurred] · New opportunity · qualify intent

Generated by prospect-follow-up-engine · routed by owner

This company is impossible without agents

8

full-time staff

1

freelancer

~25

webinars / seminars a month

Our ecosystem

Financial advisor teams

Clients who sponsor the event

SuperSeed events

Webinars + seminars in the middle

Expert speakers

Content partners who teach

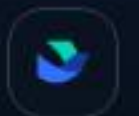

Singapore Paincare

CPF Board

Fund houses

We sell content IP that books appointments

High-quality, high-intent financial planning appointments

Four apps. That's the company OS.

Cursor

Agents + automations

GitHub

Repos by function

Google Sheets

Pipeline data

Lark

Project management

Four systems. Not four extra headcount.

Sales follow-up

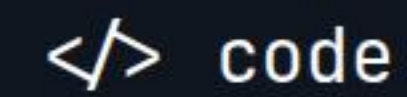

Daily checklist · heat ranking

Project management

Template tasks, auto-created

Event registration

Custom app on GitHub

Asset generation

LLMs + Netlify

GitHub is the central brain

 github.com/SuperseedMedia

sales-follow-up

events-registration

marketing-assets

ops-lark

Why repos

Different departments ship different code. Agents work on the repo that owns the function.

One repo per department / function

Department

Sales · follow-up

Events · registration

Marketing · assets

Ops

Tools the agents use

Gmail + Sheets only

`</>` 100% code

LLMs + Netlify

Lark app

Agents don't just chat. They refine automations.

Humans write the playbook. Cursor agents keep the engine sharp.

Priority follow-ups (PII blurred)

1. P1 🌶️🌶️🌶️🌶️🌶️ [blurred] · 1st Meeting Arranged · OVERDUE

2. P1 🌶️🌶️🌶️🌶️ [blurred] · Proposal / sign-off

3. P2 🌶️🌶️🌶️ [blurred] · Topic hold · confirm date

4. P2 🌶️🌶️ [blurred] · New opportunity · qualify intent

Generated by prospect-follow-up-engine · routed by owner

What the agent does

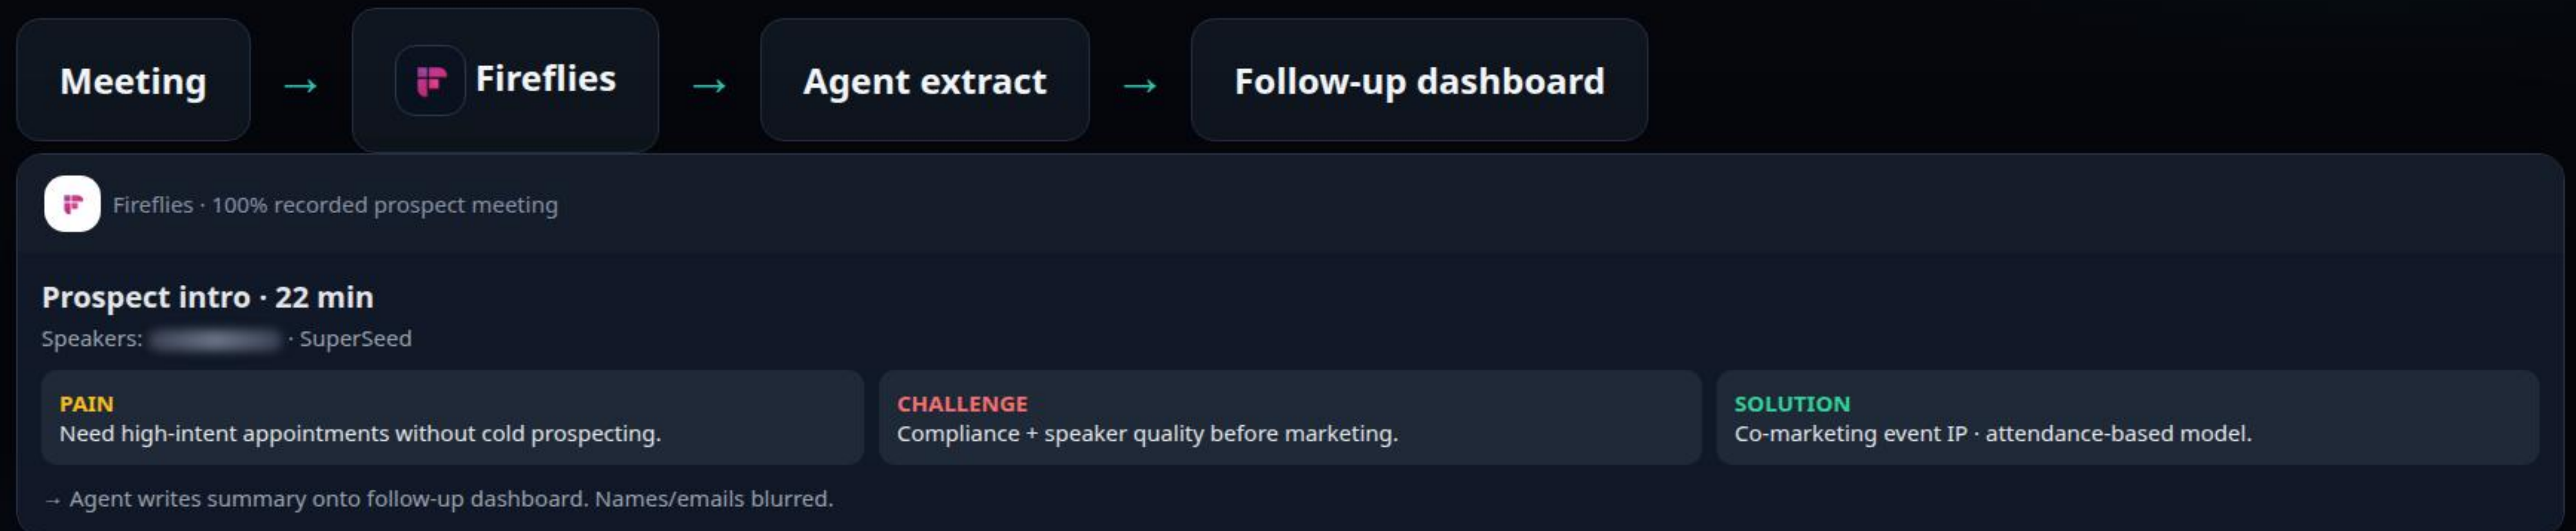

1. Summarise the day's activity

2. Rate prospects (spiciness 🌶️)

3. Route P1/P2 to Zen / Tammy / Elicia

4. Send one company-wide checklist

100% recorded. Then the dashboard writes itself.

We don't create tasks anymore

Productized work. New opportunity → Lark template pack.

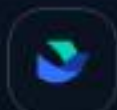

Lark · New opportunity → template tasks (auto)

Event pack · Opportunity

- Kickoff + client group ·
- Topic recommendations ·
- Speaker + venue hold ·
- Landing page + ads ·
- WhatsApp follow-up pack ·
- Event-day run of show ·

Nobody on the team creates these tasks by hand.

Agents only work if they can touch the business

	Cursor · MCP servers	
	Gmail — Inbox + Daily Growth Checklist	connected
	Fireflies — Every meeting transcript	connected
	Lark — Full PM dashboard	connected
	Google Sheets — Pipeline data	connected

Next: marketing OS, with Hypergrowth IP

Paid Hypergrowth Summit attendee · Dennis Yu marketing suite

SEO

Agent-led

Paid audit

Agent-led

Reputation → sales gap

In process now

The SuperSeed agent OS

GitHub repos

Cursor agents / automations

Gmail

Fireflies

Lark

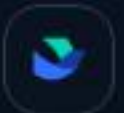

Sheets

Sales follow-up

PM templates

Events app

Assets

Same team. Different operating system.

Before

Manual tasks
Notes after meetings
Follow-up in people's heads
Assets from scratch

After

Template tasks auto-created
Transcript → dashboard
🌶️ ranked daily checklist
Asset generation system

How to copy this

1

Put work in GitHub by function

2

Connect MCP to real tools

3

Productize tasks

4

Automate daily ops + record every meeting

**8 people. 25 events.
Agents as staff.**

This is how SuperSeed actually runs.
